

Hyun Jae Moon

Sunnyvale, CA | calhyunjaemoon@gmail.com | +1 (949) 919-0085 | hyunjaemoon.com | GitHub | AOSP

CORE SKILLS

Programming Languages: Rust, Python, C++, TypeScript, JavaScript, HTML/CSS, Dart, SQL
Technologies: Flutter, React, GCP, AWS, Bazel, CMake, Docker, CI/CD, LangChain/LangGraph, Agentic AI, NL2SQL

WORK EXPERIENCE

MoonAI <i>Founder & Build/Release Engineer</i>	Remote <i>Sep 2025 - Present</i>
- Founded MoonAI (moonai.kr), an AI delivery shop serving Korea and US-based businesses offering fixed-price audit, MVP, and retainer engagements - Built PlayShelf (playsheffapp.com), a social video game tracking app featuring game rating, ranking, friend-based discovery, AI-powered suggestions, and insight enrichment via LLM, using Python (FastAPI), PostgreSQL, React, AWS, SQS, and Redis - Developed Yushin-Melamine (yushin-melamine.com), a production website for a manufacturing firm featuring an intelligent product search agent powered by LangGraph and GCP Agent Engine - Architected and implemented a phone call evaluation runner for a healthcare AI Agent company, enabling automated assessment of AI-driven patient interactions at scale	
Google <i>Senior Software Engineer</i>	Mountain View, CA <i>Oct 2024 - Sep 2025</i>
- Architected and deployed LLM-powered network engineering agents on GCP using LangChain and LangGraph, automating the analysis of 2,000+ monthly connectivity reports - Reduced average debugging time by 7 days per issue through intelligent RAG and NL2SQL pipelines, significantly improving network reliability and engineering efficiency	
<i>Software Engineer III</i>	<i>Apr 2023 - Oct 2024</i>
- Orchestrated weekly releases of network simulation software to the Android Emulator, supporting over 800,000 Daily Active Users (DAUs) - Engineered a robust CI/CD pipeline incorporating unit, integration, and end-to-end testing, reducing release friction and enhancing software stability	
<i>Software Engineer II</i>	<i>Aug 2022 - Apr 2023</i>
- Designed and implemented a high-performance Frontend API in Rust and a responsive Web UI in TypeScript for Android Emulator's network simulation tools - Integrated complex build systems using Soong, Bazel, and CMake, ensuring seamless delivery to Android Studio Canary users	
Samsung Electronics <i>Software Engineer Intern</i>	South Korea <i>June 2021 - Aug 2021</i>
Developed a defective refrigerator detection algorithm by applying advanced data clustering techniques and exploratory data analysis (EDA) to large-scale sensor data	
Republic of Korea Army <i>Sergeant, Signal Intelligence Unit</i>	South Korea <i>Oct 2018 - May 2020</i>
Developed a mission-critical Signal Database Search Tool using C++ and Qt, enhancing data retrieval speed and accuracy for intelligence operations	
Naver <i>ML Research Intern</i>	South Korea <i>June 2018 - August 2018</i>
Conducted research on state-of-the-art NLP models, including Multi-Cast Attention Networks and Transformers, to optimize chatbot performance and response accuracy	

PROJECTS

Python Testing Agent	pythontestingagent.com
Full-stack educational platform using the Gemini API to generate dynamic Python problems and autonomously grade submissions, deployed on Cloud Run with GitHub Actions CI/CD	
GCP Training	github.com/hyunjaemoon/gcp-training
Full-stack cloud training app with Firebase authentication and Vertex AI Gemini chatbot, deployable via Cloud Run and GKE with Docker and Cloud Build CI/CD	
Ollama Voice	github.com/hyunjaemoon/ollama-voice
Developed a fully local, bidirectional speech-to-speech service using Ollama, Whisper, and pytsx3 with real-time silence detection and GPU acceleration support	

EDUCATION

University of California, Berkeley <i>B.S. Electrical Engineering & Computer Science</i>	Berkeley, CA <i>May 2022</i>
