

Hyun Jae Moon

Sunnyvale, CA | calhyunjaemoon@gmail.com | +1 (949) 919-0085 | hyunjaemoon.com | GitHub | AOSP

CORE SKILLS

Programming Languages: Rust, Python, C++, TypeScript, JavaScript, HTML/CSS, Dart, SQL
Technologies: Flutter, React, GCP, AWS, Bazel, CMake, Docker, CI/CD, LangChain/LangGraph, Agentic AI, NL2SQL

WORK EXPERIENCE

CJ Olive Young Seoul, South Korea
Forward Deployed Engineer, AX Engineering Team Starting Sep 2026

MoonAI Remote
Founder & Owner Sep 2025 - Sep 2026

- Founded MoonAI (moonai.kr), an AI delivery shop serving Korea and US-based businesses offering fixed-price audit, MVP, and retainer engagements; stepped back from day-to-day operations in Sep 2026 while retaining 100% ownership
- Built PlayShelf (playshefapp.com), a social video game tracking app featuring game rating, ranking, friend-based discovery, AI-powered suggestions, and insight enrichment via LLM, using Python (FastAPI), PostgreSQL, React, AWS, SQS, and Redis
- Developed Yushin-Melamine (yushin-melamine.com), a production website for a manufacturing firm featuring an intelligent product search agent powered by LangGraph and GCP Agent Engine

Google Mountain View, CA
Senior Software Engineer Oct 2024 - Sep 2025

- Architected and deployed LLM-powered network engineering agents on GCP using LangChain and LangGraph, automating the analysis of 2,000+ monthly connectivity reports
- Reduced average debugging time by 7 days per issue through intelligent RAG and NL2SQL pipelines, significantly improving network reliability and engineering efficiency

Software Engineer III Apr 2023 - Oct 2024

- Orchestrated weekly releases of network simulation software to the Android Emulator for 800,000+ Daily Active Users, backed by a CI/CD pipeline spanning unit, integration, and end-to-end testing

Software Engineer II Aug 2022 - Apr 2023

- Built a high-performance Frontend API in Rust and a responsive Web UI in TypeScript for Android Emulator's network simulation tools, integrating Soong, Bazel, and CMake builds for delivery to Android Studio Canary

Samsung Electronics | *Software Engineer Intern, South Korea* June 2021 - Aug 2021

- Developed a defective refrigerator detection algorithm using data clustering and exploratory data analysis on large-scale sensor data

Republic of Korea Army | *Sergeant, Signal Intelligence Unit, South Korea* Oct 2018 - May 2020

- Built a mission-critical Signal Database Search Tool in C++ and Qt, improving data retrieval speed and accuracy for intelligence operations

Naver | *ML Research Intern, South Korea* June 2018 - Aug 2018

- Researched state-of-the-art NLP models, including Multi-Cast Attention Networks and Transformers, to optimize chatbot performance and response accuracy

PROJECTS

Python Testing Agent pythontestingagent.com

- Full-stack educational platform using the Gemini API to generate dynamic Python problems and autonomously grade submissions, deployed on Cloud Run with GitHub Actions CI/CD

GCP Training github.com/hyunjaemoon/gcp-training

- Full-stack cloud training app with Firebase authentication and Vertex AI Gemini chatbot, deployable via Cloud Run and GKE with Docker and Cloud Build CI/CD

Ollama Voice github.com/hyunjaemoon/ollama-voice

- Developed a fully local, bidirectional speech-to-speech service using Ollama, Whisper, and pytsx3 with real-time silence detection and GPU acceleration support

EDUCATION

University of California, Berkeley Berkeley, CA
B.S. Electrical Engineering & Computer Science May 2022
